

Thursday, October 3, 3pm-5pm
Olin Library 107, the Digital Colab

OPEN DATA MAPATHON

for Disaster Relief & Food Security

Please join us for our first OpenStreet Map Mapathon of the year! Mapathons are coordinated mapping events where people can come together to improve coverage for online maps, such as through tracing satellite imagery. No experience in mapping or GIS is necessary to attend this event. Guidance, assistance, and tutorials will be provided for all who want to learn!

OpenStreetMap is an open, editable map of the world, with data that can be created and used by anyone. It's a vital resource for humanitarian organizations, planners, and community groups around the world, particularly in areas where few detailed maps already exist.

For this Mapathon, we will be responding to a request by a Philippines based YouthMappers chapter on mapping parts of the Mindanao region, as a way to support rural communities with food security issues and improve local infrastructure.

Bring your laptop or borrow one from the library

Pizza and drinks will be served

RSVP at <http://cglink.me/r581923>
